Making One - 2!

All of the following 'sums' when given the correct operators work out to have the value 1.

For example, if $7 \_ 2 \_ 4 \_ 2 = 1$ is the target sum you need to have the operators +, - and × in that order to give the right answer which is $7 + 2 - 4 \times 2 = 1$. Do not expect to come up with the ansers in one or two seconds. It could take a minute or so for some of the exercises!!
